

## INCLINE MIRROR

A full length wall mirror with an elegant twist. With its simple, minimalist aesthetic this large format mirror can simply lean against any wall or corner. The clean, timber surround envelopes a mirror which is held at a slight upward angle to the vertical plane. This helps one see their reflection more easily, particularly if they are on the taller side – no more stooping down to look at your face if you're a bit taller than average, and no more cut-off heads. This stylish mirror caters for all shapes and sizes and looks very clean and minimal. By slightly angling the mirror against the wall, this further accentuates the upward incline of the mirror itself, as if it were pivoting within the mirror frame.
